Treating AIDS - Thurka Sangaramoorthy 2014-03-26

There is an inherently powerful and complex paradox underlying HIV/AIDS prevention—between the focus on collective advocacy mobilized to combat global HIV/AIDS and the staggeringly disproportionate rates of HIV/AIDS in many places. In *Treating AIDS*, Thurka Sangaramoorthy examines the everyday practices of HIV/AIDS prevention in the United States from the perspective of AIDS experts and Haitian immigrants in South Florida. Although there is worldwide emphasis on the universality of HIV/AIDS as a social, political, economic, and biomedical problem, developments in HIV/AIDS prevention are rooted in and focused exclusively on disparities in HIV/AIDS morbidity and mortality framed through the rubric of race, ethnicity, and nationality. Everyone is at equal risk for contracting HIV/AIDS, Sangaramoorthy notes, but the ways in which people experience and manage that risk—and the disease itself—is highly dependent on race, ethnic identity, sexuality, gender, immigration status, and other notions of “difference.” Sangaramoorthy documents in detail the work of AIDS prevention programs and their effect on the health and well-being of Haitians, a transnational community long plagued by the stigma of being stereotyped in public discourse as disease carriers. By tracing the ways in which public knowledge of AIDS prevention science circulates from sites of surveillance and regulation, to various clinics and hospitals, to the social worlds embraced by this immigrant community, she ultimately demonstrates the ways in which AIDS prevention programs help to reinforce categories of individual and collective difference, and how they continue to sustain the persistent and pernicious idea of race and ethnicity as risk factors for the disease.

Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases - Taukeni, Simon George 2020-04-17

While there are a number of clinical practices for treating a variety of diseases, there is an urgent need to integrate bio-psychosocial perspectives and practices in order to promote comprehensive healthcare. Current research reports that diseases such as HIV/AIDS, malaria, diabetes, cardiovascular diseases, and heart diseases are a growing threat to the health and quality of life of individuals across the globe. Considering that nearly all these diseases are directly related to the lifestyle of an individual, prevention and intervention should be devised to address psychological, emotional, social, and spiritual factors. *Biopsychosocial Perspectives and Practices for Addressing Communicable and Non-Communicable Diseases* is a collection of theoretical research that promotes good health and quality of life through psychosocial interventions to address psychosocial problems facing individuals such as discrimination and stigma, stress, depression, alcohol and drug abuse, smoking, lack of physical activity, and many other socio-economic factors. While highlighting topics including mental health, traditional healthcare, and global health, this book is ideally designed for therapists, counselors, psychologists, medical professionals, hospital administrators, researchers, academicians, and students in fields that include public health, nursing, community-based healthcare, health psychology, HIV/AIDS education, human movement education, and sport psychology.
