Islam and the Securitisation of Population Policies - Dr Katrina Riddell 2013-03-28

There has been much scholarly debate on the politically disruptive capabilities of Islam and the threats to global security posed by or to Muslim states and societies, but within this dialogue there has been little recognition of the role of population policies in security issues. Katrina Riddell's study focuses specifically on Islam and the securitization of population policies and sustainability. Opening with a discussion of contemporary population discourses and their historical foundations, the book examines how population growth has become an international security issue. The author takes the examples of Pakistan and Iran to provide a nuanced understanding of Muslim states' interaction with global debates on sustainability. She also explores how Muslim and non-Muslim states, societies and agents perceive issues of population growth and control. Providing an innovative approach to the pursuit of global sustainability and security, this book presents useful material to scholars whose research focuses on Islam and the future.

International Relations and Global Climate Change - Urs Luterbacher 2001-10-26

This book surveys current conceptual, theoretical, and methodological approaches to global climate change and international relations.

Although it focuses on the role of states, it also examines the role of nonstate actors and international organizations whenever state-centric explanations are insufficient. The book begins with a discussion of environmental constraints on human activities, the environmental consequences of human activities, and the history of global climate change cooperation. It then moves to an analysis of the global climate regime from various conceptual and theoretical perspectives. These include realism and neorealism, historical materialism, neoliberal institutionalism and regime theory, and epistemic community and cognitive approaches. Stressing the role of nonstate actors, the book looks at the importance of the domestic-international relationship in negotiations on climate change. It then looks at game-theoretical and simulation approaches to the politics of global climate change. It emphasizes questions of equity and the legal difficulties of implementing the UN Framework Convention on Climate Change and the Kyoto Protocol. It concludes with a discussion of global climate change and other aspects of international relations, including other global environmental accords and world trade. The book also contains Internet references to major relevant documents.

Global Trends 2040 - National Intelligence Council 2021-03

"The ongoing COVID-19 pandemic marks the most significant, singular

global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Diplomacy: A Very Short Introduction - Joseph M. Siracusa 2010-08-26 Diplomacy means different things to different people, the definitions ranging from the elegant ("the management of relations between independent states by the process of negotiations") to the jocular ("the art of saying 'nice doggie' until you can find a rock"). Written by Joseph M. Siracusa, an internationally recognized expert, this lively volume introduces the subject of diplomacy from a historical perspective, providing examples from significant historical phases and episodes to illustrate the art of diplomacy in action, highlighting the milestones in its evolution. The book shows that, like war, diplomacy has been around a very long time, at least since the Bronze Age. It was primitive by today's standards, there were few rules, but it was a recognizable form of diplomacy. Since then, diplomacy has evolved greatly, to the extent that the major events of modern international diplomacy have dramatically shaped the world in which we live. Indeed, the case studies chosen here demonstrate that diplomacy was and remains a key element of statecraft, and that without skilful diplomacy political success may remain elusive.

New Security Challenges in Postcommunist Europe - Andrew Cottey 2002

Written by leading scholars from Eastern and Western Europe, this book highlights the fundamental security issues affecting Europe as the postcommunist states are drawn into the continent's mainstream.

Global Trends 2030 - National Intelligence Council (U.S.) 2012

This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.

Interim National Security Strategic Guidance - President Joseph R Biden 2021-03

"We are in the midst of a fundamental debate about the future direction of our world...No nation is better positioned to navigate this future than America." -President Joseph R. Biden, Jr., Interim National Security Strategic Guidance (2021) Interim National Security Strategic Guidance-2021 was issued in March 2021 to convey President Joe Biden's vision for how America will engage with the world, and to provide guidance for US departments while the Biden Administration begins work on a National Security Strategy. This short essay is a good companion to two other reports released during the same period: The Annual Threat Assessment, an annual report of worldwide threats to the national security of the United States, compiled by the US Intelligence Community; and Global Trends 2040-A More Contested World by the National Intelligence Council, which specifically describes long-term global challenges (both available from Cosimo Reports). Students of national security, policymakers, journalists, and anyone interested in US

security will find this report essential reading.

From Colonization to Nation-State - Riwanto Tirtosudarmo

2022-03-26

This book examines the history of the political demography of Indonesia. Chronologically, the book begins by introducing the colonization program as a predecessor of transmigration program after independence. The transmigration program, Indonesia's state policy on migration, is discussed at length in the book but other migration related issues are also presented to show the complex relationship between migration and other social, economic and political issues in Indonesia. In the final chapter, the book discusses the contemporary issues and challenges of disintegration that is facing Indonesia as a nation-state. The book ends with an epilog that shows Indonesia's political demography challenges in the 21st Century.

2013-02-01

The contributors reflect critically on security studies since the 1980s. They conclude that analysts and policy-makers have not been able to respond well to the changes that have occurred and that they must revise their approach if they are to meet the challenges of the future.

State Participation in International Treaty Regimes - Sрни Sitaraman

2016-04-01

Why do some states resist entering into international treaty regimes while others demonstrate eagerness to participate? Although factors such as degree of pressure exerted by international actors, ambiguity in the treaty language and a regime's 'lack of teeth' (enforcement and sanctioning mechanism) do affect participation, this book investigates whether internal (domestic) factors may ultimately be responsible for influencing why a state resists or joins international treaty regimes. The volume draws on United Nations treaty ratification data from three different issue areas - arms control, environment and human rights - to study the participation patterns of democracies and non-democracies in international treaty regimes. Incorporating two in-depth case studies on the United States and China, the author traces the impact of domestic

institutional structure, state capacity and internal social norms on state decisions to resist or participate.

New Security Agenda, The; A Global Survey - Paul B. Stares 1998-08

Since the end of the cold war, a diverse and expansive array of issues have been identified as "new" security threats ranging from ethnic conflict, environmental degradation, and resource scarcity to weapons proliferation, uncontrolled migration, and organized crime. This has sparked an intense and contentious debate about the appropriate parameters and priorities of security policy. The traditional concern with military threats is increasingly criticized as being too narrow, anachronistic, and often preoccupied with the interests of the state as opposed to the individual. This book assesses how the meaning of security is changing around the world and, more specifically, how the new security issues are perceived and debated in different countries and regions. With individual chapters dealing with North America, the former Soviet Union, Europe, the Middle East, Africa, Latin America, Japan, South Korea, China, the ASEAN bloc, and the countries of the Southwest Pacific, this book represents the first truly global survey of its kind. It is an invaluable resource for those seeking deeper insight into the contemporary international debate about emerging security concerns.

Plagues and Politics - A. Price-Smith 2001-04-30

Infectious diseases once thought to be controlled (such as malaria and tuberculosis) are now spreading rapidly across the globe, and lethal new disease agents (HIV/AIDS, ebola and BSE) continue to emerge at an ominous pace. Policymakers must consider the implications of disease proliferation for economic prosperity, general well-being, and national security in affected societies. This work represents a collection of articles from the premier authors in the field on the ramifications of disease emergence for international development, international law, and national security.

The Real and the Ideal - Anthony Lake 2001-08-28

A teacher, scholar, practitioner, and publicist, Richard Ullman has been a unique and influential figure in U.S. foreign and security policy over the past forty years. This volume, created on the initiative of some of Ullman's most accomplished former students, is less a summing up of his work than a sort of intellectual kaleidoscope held up to his ideas. The result is a spirited and highly readable set of essays on themes relating to U.S. foreign and defense policy in a period of nearly unprecedented dynamism in the international system. The volume includes contributions by David Gompert, I.M. Destler, Michael Doyle, Michael O'Hanlon, and eight other distinguished scholars and practitioners of international relations. A Council on Foreign Relations book.

Refugee Law and Practice in Japan - Osamu Arakaki 2016-12-05

This volume examines the development of refugee law and policy in Japan. The book discusses systemic weaknesses and compares the evolution of law in other states to highlight problems in Japan's refugee determination system. Ultimately, the book calls for Japan to reform failing systems and take innovative action towards refugee protection.

Environmental Security in the Anthropocene - Judith Nora Hardt
2017-09-22

This book provides a critical assessment of the theories and practice of environmental security in the context of the Anthropocene. The work analyses the intellectual foundations, the evolution and different interpretations, strengths and potential of the link between environment

and security, but also its weaknesses, incoherencies and distortions. To do so, it employs a critical environmental security studies analytical framework and uniquely places this analysis within the context of the Anthropocene. Furthermore, the book examines the practice-theory divide, and the political implementation of the environmental security concept in response to global environmental change and in relation to different actors. It pays significant attention to the Environment and Security Initiative (ENVSEC), which is led by different programs of the United Nations, the OSCE and until recently by the North Atlantic Treaty Organization (NATO), among others, and has largely been overlooked in the academic literature to date. The goal is to study how environmental security practice could inform and shape the environmental security theory, and also to explore how, conversely, new theoretical insights could contribute to the enhancement of environmental security activities. This book will be of great interest to students and academic scholars of Environmental Security, Critical Security Studies, Green Political Theory, Global Governance and International Relations in general.

Global Health - John J. Kirton 2017-05-15

In recent years, especially since the end of the cold war, the field of global health has become increasingly linked with and central to the more traditional concerns of international relations. The spread of communicable diseases, the challenge of migrating health workers and the development of new technologies and medicines have all contributed to the ever-expanding issue of global health. International organizations such as the World Health Organization, the utilization of techniques such as the creation of the framework convention on tobacco control and the development of civil society organizations such as the Gates Foundation, have all changed the face and framework of global health. Among the many benefits to the expanding interdisciplinary study of health is the possibility of preventing millions of unnecessary deaths occurring every year. By assembling from a wide array of disciplines and fields the central works that define the field in international relations today, this innovative work explores the future of global health and the possible benefits of expanding the interdisciplinary path even further.

Facing Global Environmental Change - Hans Günter Brauch
2009-06-04

The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth - assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change, but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US, Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change, and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

Managing the Risks of Extreme Events and Disasters to Advance

Climate Change Adaptation - Christopher B. Field 2012-05-28

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Contemporary Global Governance - Dries Lesage 2009

This book explores two dimensions of contemporary global governance. The first part looks at the relationship between multipolarity and global governance. Thus the position of major players in global governance - namely China, Russia, the Trilateral Dialogue Forum of India, Brazil and South Africa (IBSA), Japan and the EU - is examined. The second part takes a look at particular discourses that inform the debate about global governance. In this context, the book investigates issues such as the relationship between global governance and democracy, global governance and security thinking, and the way international institutions influence national policy. This volume builds on research activities within

the network REGIMEN (Research Network on International Governance, Globalization and the Transformation of the State).

migration and nationalism.

Primacy and Its Discontents - Sean M. Lynn-Jones 2008

Experts consider whether American primacy will endure or if the future holds a multipolar world of several great powers. The unprecedented military, economic, and political power of the United States has led some observers to declare that we live in a unipolar world in which America enjoys primacy or even hegemony. At the same time public opinion polls abroad reveal high levels of anti-Americanism, and many foreign governments criticize U.S. policies. *Primacy and Its Discontents* explores the sources of American primacy, including the uses of U.S. military power, and the likely duration of unipolarity. It offers theoretical arguments for why the rest of the world will—or will not—align against the United States. Several chapters argue that the United States is not immune to the long-standing tendency of states to balance against power, while others contend that wise U.S. policies, the growing role of international institutions, and the spread of liberal democracy can limit anti-American balancing. The final chapters debate whether countries are already engaging in "soft balancing" against the United States. The contributors offer alternative prescriptions for U.S. foreign policy, ranging from vigorous efforts to maintain American primacy to acceptance of a multipolar world of several great powers. Contributors Gerard Alexander, Stephen Brooks, John G. Ikenberry, Christopher Layne, Keir Lieber, John Owen IV, Robert Pape, T. V. Paul, Barry Posen, Kenneth Waltz, William Wohlforth

WORLD INSECURITY - Miguel Vilombo 2014

The world is increasingly becoming interdependent and this interdependency has raised the number of unmistakable vulnerabilities, threats and risks. The institutions of governance in weak and failing states are driving forces that often lead to environmental damage, mismanagement of natural resources, to the expansion of international terrorism, inter-religious violence, transnational organized crime, and to piracy activities that affect energy security in the Gulf of Guinea and Aden. All this creates open security spaces whose impacts are national, sub-regional, regional, and threatens the international security order.

The UN and other intergovernmental bodies are often drawn in to mitigate conflicts and political crisis, and to provide emergency humanitarian responses, at very high costs. The cost of post-conflict society's recovery processes such as rebuilding institutions of governance is enormous due to financial and human resources commitment efforts. Therefore to resolve insecurity problems, a firefighter strategy is not good enough unless efforts are redirected towards information, management and analysis of global trends to enable a more adequate response to the crisis. The main issue is therefore to provide now and for future generations a response that has to be effective and adequate to both manmade and natural crisis."

For over five decades, the Cold War security agenda was distinguished by the principal strategic

balance, that of a structure of bipolarity, between the United States (US) and the Soviet Union (USSR). This book seeks to draw from current developments in critical security studies in order to establish a new framework of inquiry for security in the Middle East. It addresses the need to redefine security in the Middle East. The focus is squarely on the Arab-Israeli context in general, and the Palestinian-Israeli context in particular. The character of Arab-Israeli relations are measured by the Israeli foreign policy debate from the 1950s to the 1990s. A dialogue between Islam and Islamism as a means to broaden the terrain on which conflict resolution and post-bipolar security in the Middle East is to be understood is presented. The Middle East peace process (MEPP) was an additional factor in problematizing the military-strategic concept of security in the Middle East. The shift in analysis from national security to human security reflects the transformations of the post-Cold War era by combining military with non-military concerns such as environmental damage, social unrest, economic mismanagement, cultural conflict, gender inequity and radical fundamentalism. By way of contrast to realist international relations (IR) theory, developing-world theorists have proposed a different set of variables to explain the unique challenges facing developing states. Finally, the book examines the significance of ecopolitics in security agendas in the Middle East.
