This groundbreaking work provides readers with tools they can use to maximize potential in themselves and others. Whether you're coaching soccer or teaching a child to play the piano, writing a novel or trying to improve your golf swing, this revolutionary book shows you how to grow talent by tapping into a newly discovered brain mechanism. Drawing on cutting-edge neurology and firsthand research gathered on journeys to nine of the world's talent hotbeds—from the baseball fields of the Caribbean to a classical-music academy in upstate New York—Coyle identifies the three key elements that will allow you to develop your gifts and optimize

your performance in sports, art, music, math, or just about anything. • Deep Practice Everyone knows that practice is a key to success. What everyone doesn't know is that specific kinds of practice can increase skill up to ten times faster than conventional practice. • Ignition We all need a little motivation to get started. But what separates truly high achievers from the rest of the pack? A higher level of commitment—call it passion—born out of our deepest unconscious desires and triggered by certain primal cues. Understanding how these signals work can help you ignite passion and catalyze skill development. • Master Coaching What are the secrets of the world's most effective teachers, trainers, and coaches? Discover the four virtues that enable these "talent whisperers" to fuel passion, inspire deep practice, and bring out the best in their students. These three elements work together within your brain to form myelin, a microscopic neural substance that adds vast amounts of speed and accuracy to your movements and thoughts. Scientists have discovered that myelin might just be the holy grail: the foundation of all forms of greatness, from Michelangelo's to Michael Jordan's. The good news about myelin is that it isn't fixed at birth; to the contrary, it grows, and like anything that grows, it can be cultivated and nourished. The Evolution of the Airline Industry - Steven Morrison 2010-12-01
Since the enactment of the Airline Deregulation Act in 1978, questions that had been at the heart of the ongoing debate about the industry for eighty years gained a new intensity: Is there enough competition among airlines to ensure that passengers do not pay excessive fares? Can an unregulated airline industry be profitable? Is air travel safe?

While economic regulation provided a certain stability for both passengers and the industry, deregulation changed everything. A new fare structure emerged; travelers faced a variety of fares and travel restrictions; and the offerings changed frequently. In the last fifteen years, the airline industry's earnings have fluctuated wildly. New carriers entered the industry, but several declared bankruptcy, and Eastern, Pan Am, and Midway were liquidated. As financial pressures mounted, fears have arisen that air safety is being compromised by carriers who cut costs by skimping on maintenance and hiring inexperienced pilots. Deregulation itself became an issue with many critics calling for a return to some form of regulation. In this book, Steven A. Morrison and Clifford Winston assert that all too often public discussion of the issues of airline competition, profitability, and safety take place without a firm understanding of the facts. The policy recommendations that

emerge frequently ignore the long-run evolution of the industry and its capacity to solve its own problems. This book provides a comprehensive profile of the industry as it has evolved, both before and since deregulation. The authors identify the problems the industry faces, assess their severity and their underlying causes, and indicate whether government policy can play an effective role in improving performance. They also develop a basis for understanding the industry's evolution and how the industry will eventually adapt to the unregulated economic environment. Morrison and Winston maintain that although the airline industry has not reached long-run equilibrium, its evolution is proceeding in a positive direction—one that will preserve and possibly enhance the benefits of deregulation to travelers and carriers. They conclude that the federal government's primary policy objective should be to expand the benefits from unregulated market forces to international travel. Brookings Review article also available

Population 10 Billion - Danny Dorling 2013-06-20 Before May 2011 the top demographics experts of the United Nations had suggested that world population would peak at 9.1 billion in 2100, and then fall to 8.5 billion people by 2150. In contrast, the 2011 revision suggested that 9.1 billion would be achieved much earlier, maybe by 2050 or before, and by 2100 there would be 10.1 billion of us. What's more, they implied that global human population might still be slightly rising in our total numbers a century from now. So what shall we do? Are there too many people on the planet? Is this the end of life as we know it? Distinguished geographer Professor Danny Dorling thinks we should not worry so much and that, whatever impending doom may be around the corner, we will deal with it when it comes. In a series of fascinating chapters he charts the rise of the human race from its origins to its end-point of population 10 billion. Thus he shows that while it took until about 1988 to reach 5 billion we reached 6 billion by 2000, 7 billion eleven years later and will reach 8 billion by 2025. By recording how we got here, Dorling is able to show us the key issues that we face in the coming decades: how we will deal with scarcity of resources; how our cities will grow and become more female; why the change that we should really prepare for is the population decline that will

occur after 10 billion. Population 10 Billion is a major work by one of the world's leading geographers and will change the way you think about the future. Packed full of counter-intuitive ideas and observations, this book is a tool kit to prepare for the future and to help us ask the right questions

Finding George Orwell in Burma - Emma Larkin 2006-03-06
A fascinating political travelogue that traces the life and work of George Orwell, author of 1984 and ANIMAL FARM, in Southeast Asia Over the years the American writer Emma Larkin has spent traveling in Burma, also known as Myanmar, she's come to know all too well the many ways this brutal police state can be described as "Orwellian." The life of the mind exists in a state of siege in Burma, and it long has. But Burma's connection to George Orwell is not merely metaphorical; it is much deeper and more real. Orwell's mother was born in Burma, at the height of the British raj, and Orwell was fundamentally shaped by his experiences in Burma as a young man working for the British Imperial Police. When Orwell died, the novel-in-progress on his desk was set in Burma. It is the place George Orwell's work holds in Burma today, however, that most struck Emma Larkin. She was frequently told by Burmese acquaintances that Orwell did not write one book about their country - his first novel, Burmese Days - but in fact he

wrote three, the "trilogy" that included Animal Farm and Nineteen Eighty-Four. When Larkin quietly asked one Burmese intellectual if he knew the work of George Orwell, he stared blankly for a moment and then said, "Ah, you mean the prophet!" In one of the most intrepid political travelogues in recent memory, Emma Larkin tells of the year she spent traveling through Burma using the life and work of George Orwell as her compass. Going from Mandalay and Rangoon to poor delta backwaters and up to the old hill-station towns in the mountains of Burma's far north, Larkin visits the places where Orwell worked and lived, and the places his books live still. She brings to vivid life a country and a people cut off from the rest of the world, and from one another, by the ruling military junta and its vast network of spies and informers. Using Orwell enables her to show, effortlessly, the weight of the colonial experience on Burma today, the ghosts of which are invisible and everywhere. More important, she finds that the path she charts leads her to the people who have found ways to somehow resist the soul-crushing effects of life in this most cruel police state. And George Orwell's moral clarity, hatred of injustice, and keen powers of observation serve as the author's compass in another sense too: they are qualities she shares and they suffuse her book - the keenest and finest reckoning with life in this police state that has yet been written.

The eighteenth annual volume of the National Bureau of Economic Research's Innovation Policy and the Economy focuses on research that explores the interplay between new technologies and organizational structures, such as networks and corporations. In the first chapter, Glenn Ellison and Sara Fisher Ellison explore how consumer search in a technology-mediated marketplace can affect the incentives for firms to engage in price obfuscation. In the second chapter, Aaron Chatterji focuses on the role of innovation in American primary and secondary education (K–12), emphasizing recent evidence on the efficacy of classroom technologies. The third chapter, by economic sociologist Olav Sorenson, considers how information, influence, and resources flow through innovation networks. The last two chapters focus on how corporate organizational structures influence innovation and dynamism. In the fourth chapter, Andreas Nilsson and David Robinson develop a synthetic framework for understanding the emergence and choices of social entrepreneurs and socially responsible firms. In the fifth chapter, Steven Kaplan argues that there is little empirical evidence to support the common claim that investor pressure for short-term financial results leads U.S. companies to systematically underinvest in long-term capital expenditures and R&D.
