Teaching General Music brings together the top scholars and practitioners in general music education to create a panoramic view of general music pedagogy and to provide critical lenses through which to view these frameworks. The collection includes an examination of the most prevalent approaches to teaching general music, including Dalcroze, Informal Learning, Interdisciplinary, Kodály, Music Learning Theory, Orff Schulwerk, Social Constructivism, and World Music Pedagogy. In addition, it provides critical analyses of general music and teaching systems, in light of the ways children around the world experience music in their lives. Rather than promoting or advocating for any single approach to teaching music, this book presents the various approaches in conversation with one another. Highlighting the perceived and documented benefits, limits, challenges, and potentials of each, Teaching General Music offers myriad lenses through which to re-read, re-think, and re-practice these approaches.

Active Aging - Rocío Fernández-Ballesteros 2008-10

Aging well and continuing to be active are often regarded as THE goals in life, from individual, family, community, and population perspectives. This implies good health and physical fitness, good cognitive and positive emotional-motivational functioning, and social participation and engagement. Increasing life expectancy by means of biomedical advances is not on its own enough, however. Research shows that an individual's psychological condition contributes to their quality of life and well-being in old age - and that behavioral and psychological interventions can also prevent illness, improve cognitive and physical fitness, and increase positive emotional functioning and social participation. This book shows how psychologists and psychological science as a whole can face the challenge of promoting optimal and active aging in a society that is growing ever older.

The four sections that comprise this collection address, respectively, using focus groups in novel contexts; employing focus groups in mixed methods research designs; innovations in generating focus group data; and new theoretical developments. *A New Era in Focus Group Research* will be of interest to students and scholars across disciplines as well as focus group practitioners outside of academia.

It describes the relationship between thinking and music, and discusses the relationship between thinking and music in pre-schoolers and schoolchildren in areas such as singing, aesthetic appreciation, rhythmic and melodic development, and the acquisition of harmony and tonality. The book describes the development of musical taste, and discusses the questions of musical creativity, and of the social psychology of musical taste and fashion. The Second Edition completely revises and updates the first edition. Its authors are physicians: a psychiatrist and geriatrician, a primary care physician, and a professor of nursing and specialist in mental health nursing. The Second Edition surveys the historical connections between religion and health and grapples with the distinction between the terms "religion" and "spirituality" in research and clinical practice. It reviews research on religion and mental health, as well as extensive research literature on the mind-body relationship, and develops a model to explain how religious involvement may impact physical health through the mind-body mechanisms. It also explores the direct relationships between religion and physical health, covering such topics as immune and endocrine function, heart disease, hypertension and stroke, neurological disorders, cancer, and infectious diseases; and examines the consequences of illness including chronic pain, disability, and quality of life. Finally, the Handbook reviews research methods and addresses applications to clinical practice. Theological perspectives are interwoven throughout the chapters. The Handbook is the most insightful and authoritative resource available to anyone who wants to understand the relationship between

religion and health.
