NBER Macroeconomics Annual 2021 - Martin Eichenbaum

2022-05-17

The NBER Macroeconomics Annual 2021 presents research-central issues in contemporary macroeconomics. Robert Hall and Marianna Kudlyak examine unemployment dynamics during economic recoveries.

They present new empirical findings and explore models in which the labor market gradually draws down the stock of unemployed workers in the aftermath of a downturn. Titan Alon, Sena Coskun, Matthias Doepke, David Koll, and Michèle Tertilt analyze the relative decline in employment of women during the COVID-19 pandemic and the associated global recession. They show that increased childcare needs, which fell more heavily on women, and differences in occupations both contributed. In the case of the US, however, each of these factors account for less than 20% of the gender gap in hours worked during the pandemic. Richard Rogerson and Johanna Wallenius study the employment rates of older workers in OECD countries over the last forty years. An expansion of institutions incentivizing retirement, concurrent with negative aggregate shocks between 1970 and 1995, led to falling employment rates. This trend started to reverse in the mid-1990s when many of these institutions, such as public pension programs, were cut back. Michael Barnett, William Brock, and Lars Peter Hansen explore the consequences of risk, ambiguity, and model misspecification in climate policy design. They consider carbon emissions pricing and the effects of different sources of uncertainty--such as future information about

environmental damage, uncertainties in carbon and temperature dynamics and damage functions, and the role of future green technologies--on policy design. Michael Kremer, Jack Willis, and Yang You present new evidence suggesting a steady trend toward income convergence across countries since the late 1980s. They find convergence in various determinants of economic growth across countries and a flattening of the relationship between growth and these determinants. The paper challenges theories of growth arising after earlier rejections of the neoclassical growth model.

Digital Insights 2020 - Michael De Kare-Silver 2014-05-28

Everything we are used to is changing. From the author of the groundbreaking and landmark books *e-shock 2000*, *Strategy in Crisis* and *Streamlining*, comes this breakthrough new work looking at the future of the digital age. *Digital Insights 2020* examines how the rapidly developing technology revolution is changing the way businesses must operate in this unfolding 21st century. It also considers the impact on people and how our daily lives and lifestyles will change... forever. Included is a blueprint and roadmap showing how companies can navigate their way through the rapidly changing environment and still emerge as winners. Our computer world of point-and-click is morphing into 'Think', 'Talk' and 'Move', where just thought, voice and simple remote gestures will control 3D holographic displays of data, content and video. Companies will need to reinvent themselves as MCEs (multi-channel enterprises), in which there is seamless cross-channel interaction with customers and they will also need to change the way their operating systems and processes are organized. Most every business in most every sector will need to manage its way through significant 'digital transformation'. New advances in the Cloud will cut costs and time to market and challenge decades of IT infrastructure. Technology generally is now becoming the key source of enablement and competitive advantage. Written by someone on the 'front line of digital', this book is essential for anyone looking to take advantage of the digital world to increase revenues and profits.

Brief Principles of Macroeconomics - N. Gregory Mankiw 2000-06-01

For instructors who prefer less coverage of micro topics than is offered in Mankiw's highly acclaimed textbook *Principles of Macroeconomics*, Mankiw now provides an excellent resource in this briefer version. Mankiw's principles texts have received such praise as perhaps the best ever coverage in economic principles. It's no wonder Mankiw's prize project has quickly become one of the most successful books ever to be published in the college marketplace. The author's conversational writing style is superb for presenting the politics and science of economic theories to tomorrow's decision-makers. Because Mankiw wrote it for the students, the book stands out among all other texts by intriguing students to apply an economic way of thinking in their daily lives."

Inflation, Unemployment, and Monetary Policy - Robert M. Solow 1998
Edited and with an introduction by Benjamin M. Friedman
The connection between price inflation and real economic activity has been a focus of macroeconomic research--and debate--for much of the past century. Although this connection is crucial to our understanding of what monetary policy can and cannot accomplish, opinions about its basic properties have swung widely over the years. Today, virtually everyone studying monetary policy acknowledges that, contrary to what many modern macroeconomic models suggest, central bank actions often affect both inflation and measures of real economic activity, such as output, unemployment, and incomes. But the nature and magnitude of these effects are not yet understood. In this volume, Robert M. Solow and John B. Taylor present their views on the dilemmas facing U.S. monetary policymakers. The discussants are Benjamin M. Friedman, James K. Galbraith, N. Gregory Mankiw, and William Poole. The aim of this lively exchange of views is to make both an intellectual contribution to macroeconomics and a practical contribution to the solution of a public policy question of central importance.

Lectures on Macroeconomics - Olivier Blanchard 1989-03-21

The main purpose of *Lectures on Macroeconomics* is to characterize and explain fluctuations in output, unemployment and movement in prices.

Lectures on Macroeconomics provides the first comprehensive description and evaluation of macroeconomic theory in many years. While the authors' perspective is broad, they clearly state their assessment of what is important and what is not as they present the essence of macroeconomic theory today. The main purpose of *Lectures on Macroeconomics* is to characterize and explain fluctuations in output, unemployment and movement in prices. The most important fact of modern economic history is persistent long term growth, but as the book makes clear, this growth is far from steady. The authors analyze and explore these fluctuations. Topics include consumption and investment; the Overlapping Generations Model; money; multiple equilibria, bubbles, and stability; the role of nominal rigidities; competitive equilibrium business cycles, nominal rigidities and economic fluctuations, goods, labor and credit markets; and monetary and fiscal policy issues. Each of chapters 2 through 9 discusses models appropriate to the topic. Chapter 10 then draws on the previous chapters, asks which models are the workhorses of macroeconomics, and sets the models out in convenient form. A concluding chapter analyzes the goals of economic policy, monetary policy, fiscal policy, and dynamic inconsistency. Written as a text for graduate students with some background in macroeconomics, statistics, and econometrics, *Lectures on Macroeconomics* also presents topics in a self contained way that makes it a suitable reference for professional economists.

Information Choice in Macroeconomics and Finance - Laura L. Veldkamp

2011-08-22

An authoritative graduate textbook on information choice, an exciting frontier of research in economics and finance Most theories in economics and finance predict what people will do, given what they know about the world around them. But what do people know about their environments? The study of information choice seeks to answer this question, explaining why economic players know what they know—and how the information they have affects collective outcomes. Instead of assuming what people do or don't know, information choice asks what people would choose to know. Then it predicts what, given that information, they would choose to do. In this textbook, Laura Veldkamp introduces graduate students in economics and finance to this important new research. The book illustrates how information choice is used to answer questions in monetary economics, portfolio choice theory, business cycle theory, international finance, asset pricing, and other areas. It shows how to build and test applied theory models with information frictions. And it covers recent work on topics such as rational inattention, information markets, and strategic games with heterogeneous information. Economics as Anatomy - G.M. Peter Swann

For most of his career, Peter Swann's main research interest has been the economics of innovation. But he has also been preoccupied with a second question: what is the best way to study empirical economics? In this book, he uses his knowledge of the first question to answer the second. There are two fundamentally different approaches to innovation: incremental innovation and radical innovation - 'radical' in the sense that we go back to the 'roots' of empirical economics and take a different tack. An essential lesson from the economics of innovation is that we need both incremental and radical innovation for the maximum beneficial effect on the economy. Swann argues that the same is true for economics as a discipline. This book is a much-awaited sequel to Putting Econometrics in its Place which explored what other methods should be used, and why. This book is about the best way of organising the economics discipline, to ensure that it pursues this wide variety of methods to maximum effect.
