Behavioral and Cognitive Impairments Across the Life Span - Beatrice Arosio 2022-02-11

Vascular Cognitive Impairment - John V. Bowler 2003

Vascular dementia, caused by multiple small strokes, is the second commonest cause of dementia behind Alzheimer's disease. In recent years there has been a radical reappraisal of the concept of vascular dementia and a move away from an Alzheimer-based diagnostic paradigm towards one more appropriately tailored for vascular disease. Vascular Cognitive Impairment presents a new definition for this class of cerebrovascular process with an emphasis on early detection, prompt treatment and the prevention of disease progression. Vascular Cognitive Impairment: Preventable Dementia presents an overview of the current state of our knowledge in this field. It reviews the historical background, prevalence, risk factors and economic consequences of the condition. In

addition, the book summarises our knowledge of the pathological process, describing insight derived from genetic and imaging studies, before examining opportunities for early diagnosis, prevention and the options for management, both now, and as a result of ongoing clinical trials. With contributions from an expert team of international contributors, this book provides a comprehensive summary of the state-of-the-art in this field, providing a framework for a new understanding of a complex, disabling but Preventable condition.

Head and Neck Critical Illness - Hiroyuki Tomita 2020-12-02

There are various malignant tumors in the head and neck area, including oral cavity, pharynx, sinonasal cavity, and salivary glands. Squamous cell carcinoma is the most common cancer among head and neck cancers. In salivary glands, there are many types of malignancies that can develop, such as malignant lymphoma, adenoid cystic carcinoma, adenocarcinoma, and mesenchymal tumors. In a clinical setting, imaging, such as computed tomography (CT) and magnetic resonance imaging (MRI), is very important in terms of the prediction of the histological type and the evaluation of the extent of invasion of adjacent structures. In basic research, there are few animal models in head and neck malignancies. In this Special Issue, we broadly discuss the basic and clinical research in head and neck malignancies.

The Role of Family Physicians in Older People Care - Jacopo Demurtas 2021-12-30

This book provides family doctors with a wealth of evidence-based indications and tips regarding geriatric medicine and approaches for the management of older patients, to be applied in daily practice. After discussing old and new features of healthy ageing and the approaches required in Family Medicine Consultation, the text introduces key elements of geriatric medicine such as frailty, sarcopenia, and the comprehensive geriatric assessment (CGA), before describing a range of characteristics unique to older patients in different contexts, with a dedicated section on Palliative Care. The role of polypharmacy and the importance of quaternary prevention and deprescribing are also addressed. Finally, the book emphasizes both the importance of a humanistic approach in caring and the approach of research and meta-research in geriatrics. Though many texts explore the role of primary care professionals in geriatric medicine, the role of family doctors in older people care has not yet been clearly addressed, despite the growing burden of ageing, which has been dubbed the "silver tsunami." Family physicians care for individuals in the context of their family, community, and culture, respecting the autonomy of their patients. In negotiating management plans with their patients, family doctors integrate physical, psychological, social, cultural and existential factors, utilizing the knowledge and trust engendered by repeated visits. They do so by promoting health, preventing disease, providing cures, care, or palliation and promoting patient empowerment and self-management. This will likely become all the more important, since we are witnessing a global demographic shift and family doctors will be responsible for and involved in caring for a growing population of older patients. This book is intended for family medicine trainees and professionals, but can also be a useful tool for geriatricians, helping them to better understand some features of primary care and to more fruitfully interact with family doctors.

Rating Scales in Parkinson's Disease - Cristina Sampaio 2012-06-28

For many years, the need to develop valid tools to evaluate signs and symptoms of Parkinson Disease (PD) has been present. However the understanding of all intricacies of rating scales development was not widely available and the first attempts were relatively crude. In 2002, the Movement Disorders Society created a task force to systemize the measurement of Parkinson's Disease. Since then, the Task Force has produced and published several critiques to the available rating scales addressing both motor and non-motor domains of Parkinson Disease. Additionally the task force initiated a project to develop a new version of

the UPDRS, the MDS-UPDRS. But none of this was made available in one convenient source. Until now. Rating Scales in Parkinson's Disease is written for researchers from the medical and social sciences, and for health professionals wishing to evaluate the progress of their patients suffering from Parkinson Disease. The book is both exhaustive in the description of the scales and informative on the advantages and limitations of each scale. As such, the text clearly guides readers on how to choose and use the instruments available. Extensive cross-referenced tables and charts closely integrate the parts of the book to facilitate readers in moving from one symptom domain to another.

Cognitive Aging - Institute of Medicine 2015-07-21

For most Americans, staying "mentally sharp" as they age is a very high priority. Declines in memory and decision-making abilities may trigger fears of Alzheimer's disease or other neurodegenerative diseases. However, cognitive aging is a natural process that can have both positive and negative effects on cognitive function in older adults - effects that vary widely among individuals. At this point in time, when the older population is rapidly growing in the United States and across the globe, it is important to examine what is known about cognitive aging and to identify and promote actions that individuals, organizations, communities, and society can take to help older adults maintain and improve their cognitive health. Cognitive Aging assesses the public health dimensions of cognitive aging with an emphasis on definitions and terminology, epidemiology and surveillance, prevention and intervention, education of health professionals, and public awareness and education. This report makes specific recommendations for individuals to reduce the risks of cognitive decline with aging. Aging is inevitable, but there are actions that can be taken by individuals, families, communities, and society that may help to prevent or ameliorate the impact of aging on the brain, understand more about its impact, and help older adults live more fully and independent lives. Cognitive aging is not just an individual or a family or a health care system challenge. It is an issue that affects the fabric of society and requires actions by many and varied stakeholders. Cognitive Aging offers clear steps that individuals, families, communities,

health care providers and systems, financial organizations, community groups, public health agencies, and others can take to promote cognitive health and to help older adults live fuller and more independent lives. Ultimately, this report calls for a societal commitment to cognitive aging as a public health issue that requires prompt action across many sectors.

Elderhood - Louise Aronson 2019-06-11

Finalist for the Pulitzer Prize in General Nonfiction A New York Times Bestseller Longlisted for the Andrew Carnegie Medal for Excellence in Nonfiction Winner of the WSU AOS Bonner Book Award As revelatory as Atul Gawande's *Being Mortal*, physician and award-winning author Louise Aronson's *Elderhood* is an essential, empathetic look at a vital but often disparaged stage of life. For more than 5,000 years, "old" has been defined as beginning between the ages of 60 and 70. That means most people alive today will spend more years in elderhood than in childhood, and many will be elders for 40 years or more. Yet at the very moment that humans are living longer than ever before, we've made old age into a disease, a condition to be dreaded, denigrated, neglected, and denied. Reminiscent of Oliver Sacks, noted Harvard-trained geriatrician Louise Aronson uses stories from her quarter century of caring for patients, and draws from history, science, literature, popular culture, and her own life to weave a vision of old age that's neither nightmare nor utopian fantasy--a vision full of joy, wonder, frustration, outrage, and hope about aging, medicine, and humanity itself. *Elderhood* is for anyone who is, in the author's own words, "an aging, i.e., still-breathing human being."

Manual of Screeners for Dementia - A. J. Larner 2020-04-01

This book draws on the author's experience in conducting pragmatic test accuracy studies on screening instruments for dementia/mild cognitive impairment. To facilitate comprehension and assimilation, all data is presented in an easily accessible, succinct and user-friendly way by means of a structured tabular format that allows tests to be easily compared. The pragmatic design of studies ensures high external validity and generalizability for the test results. The book includes a wealth of data on previously presented studies, as well as hitherto unreported test measures ("Number needed" metrics). It presents recently described and new diagnostic metrics (Likelihood to be diagnosed or misdiagnosed; Summary utility index; Number needed for screening utility); data from new studies on screeners (Attended with sign; Free-Cog; Two question depression screener; Jenkins Sleep Questionnaire; Triple test); and previously unpublished data (combination of SMC Likert and MACE; IADL Scale and MMSE). Given its scope, the book will be of interest to all professionals, beginners and seasoned experts alike, whose work involves the assessment of individuals with cognitive (memory) complaints.

Neuropsychological Assessment of Neuropsychiatric Disorders - Igor Grant 1996

A 1996 survey of the members of the American Board of Professional Psychology Diplomates, published by *The Clinical Neuropsychologist* journal, selected the first edition of this book as one of the "Essential Books and Journals in North American Clinical Neuropsychology"--a list which included only 10 other titles! The Second Edition has improved further on this high standard. While the authors have retained the same general structure--with the addition of a set of three chapters on psychosocial outcomes--virtually the entire book has been rewritten and thoroughly updated to reflect recent developments in this area of

knowledge. Part I features new chapters on the Iowa-Benton approach, on cognitive screening methods, and on computers and memory. Part II has been expanded with new chapters on Tourette's syndrome, acute and chronic hypoxemia, HIV infection, schizophrenia, Huntington's disease, and an expanded chapter on Parkinson's disease. Part III is entirely new, and it focuses on life quality outcome in head injury and pulmonary disease. Considerably enlarged in size, this book will remain the basic reference on the neuropsychological aspects of diseases affecting brain and behavior.

Diet and Nutrition in Dementia and Cognitive Decline - Colin R. Martin 2014-12-30

Diet and Nutrition in Dementia and Cognitive Decline offers researchers and clinicians a single authoritative source which outlines the complex interrelationships between cognitive decline, dementia and the way diet can be modified to improve outcomes. In a cross-disciplinary field like dementia research and practice, clinicians and researchers need a

comprehensive resource which will quickly help them identify a range of nutritional components and how they affect cognitive decline and the development of dementia. While the focus is on clinical applications, the book also features landmark and innovative preclinical studies that have served as the foundation of rigorous trials. Chapters explore the evidence of how nutritional components, either in the diet or supplements, can either impede the development to, or progression from, the onset of dementia. Authors investigate how conditions and processes overlap between defined conditions and present studies which show that dietary components may be equally effective in a number of conditions characterized by declining cognition or dementia. This book represents essential reading for researchers and practicing clinicians in nutrition, dietetics, geriatrics, nursing, neurology, and psychology, as well as researchers, such as neuroscientists, molecular and cellular biochemists, interested in dementia. Explores the complex interrelationships between cognitive decline, dementia and the way diet can be modified to improve outcomes Focuses on both clinical nutrition applications and the innovative preclinical studies that serve as the foundation for rigorous trials Covers specific conditions and mechanisms in dementias, as well as general aspects, risk factors, lifestyle and guidelines for practitioners Organizes chapter content in terms of the molecular, mechanistic, epidemiologic, and practical, so that correlations can be observed across conditions

Comprehension of Wh-Dependencies in Broca's Aphasia - Vanja Kljajevic 2012-01-17

This book investigates whether Croatian aphasics, in particular those diagnosed with Broca's aphasia, have difficulty comprehending wh-dependencies. The tested structures include subject and object direct, embedded, long-distance and passivized who and which questions as well as relative clauses introduced by which. It is shown that differences in the deficit patterns between English- and Croatian-speaking Broca's aphasics are due to structural as well as processing differences. The Croatian data are explained in terms of a case-cueing comprehension strategy and the competition model.
